

CAPUCINE (TRC 7514)

Data confidentiality on X25 networks

CAPUCINE authenticates the identity of remote users willing to connect, and renders data interchanged over the network, confidential.

CAPUCINE is equipped with high level encryption algorithms and complies with TEMPEST standard AMSG 720 B, thus meaning it is designed for applications requiring a very high level of security.

Its high performances and multiple interfaces make CAPUCINE an ideal choice for low- and high-speed X25 networks. CAPUCINE can operate with or without the presence of an X25 network, allowing it to be used with a dedicated link.

- EU Classification: Up to and including **SECRET UE/EU SECRET**
- Manufacturer: Thales Communications SA 
- National Evaluator: Agence Nationale de la Sécurité des Systèmes d'Information (ANSSI)
- Second Party Evaluator: Bundesamt für Sicherheit in der Informationstechnik
