

CM109IP IP CRYPTO DEVICE

CM109IP IP CRYPTO DEVICE

DESCRIPTION

CM109IP is an IP encryption device that enables the creation of a "Virtual Private Network". A VPN is a network that features secure nodes by which those communications, using an insecure IP public network, take place. CM109IP is based upon the IP protocols, and it generates a VPN according to IETF IPSEC specifications fitted to use military algorithms. CM109IP uses a

completely new multiprocessor architecture, appointed to increase performance and avoid security problems. The encryption procedure also includes the protected LAN addresses.

Encryption is performed at the 3rd IP layer (IP-layer) and thus all communications are carried out on higher protocols (TCP/IP, UDP etc) and the relevant services (Mail,

Telnet, FTP, etc.) are made secure.

A different key is used for each LAN with a different address.

Key uploading is made up by a mobile electronic transfer device (punched tape reader or fill gun). Keys and access lists can be centrally managed (through the management system KNMS109IP) by the IP network and by protected connections.

MAIN FEATURES

- Communication protocols are implemented via software to allow easy upgrade of new functionalities (IP v.6)
- Selectable AUI or 100 base TX interface either on the red or on the black side
- Encryption algorithm on a removable dedicated module that allows it to be easily changed (with other standard or customisable algorithms)
- Modular interfaces structure with a general CPU sub-unit that supports

the development of different interface formats (ex.WAN).

Applications

- Secure connections between IP/Ethernet
- LAN on insecure public networks.

Security services

- Data confidentiality (encryption/decryption)
- Authentication

- Data integrity
- Traffic flux confidentiality (IP address encryption).

Algorithms

- NATO approved
- Nationally approved
- Customisable.

Keys storage

- Key protection from possible main power failure
- · Protection time: up to six months.

01010010010011110101010011001

Security protocols

- IPSEC: IPSEC (RFC 2401) Architecture
- AH: Authentication Header (RFC 2402)
- ESP: Encapsulating Security
 Payload (RFC 2406) in tunnelling mode.

Remote control channel

· Via IP encrypted network.

Accesses control

- Anti tampering function
- Emergency deletion by a mechanical switch (also in case of turning off or main power failure).

Logging

- Configuration operation system for the events
- · System and security alarms.

User interfaces

• Front panel (Oscreen, keypad).

Communication protocols

- IP, ARP, ICMP
- TCP, UDP.

Other features

- Built in Test Equipment (BITE)
- Access list
- Multicasting
- QoS (Quality of Services).

Implementation functionalities

- VRRP (Virtual Router Redundancy Protocol)
- OSPF (Open Shortest Path First)
- GRE (Generic Routing Encapsulation)
- IP V.6.

Network interfaces

- Red side and black side:
 - 10 Mbit/s AUI interface (IEEE 802.3);
 - 100BaseTX (UTP).

EMI/EMC

- MIL-STD-461
- MIL-STD-462.

TEMPEST

AMSG-720B.

Environmental conditions

- Operating temperature:
 from -10°C to +45°C
- Storage temperature:
 from -40°C to +70°C
- Relative humidity:
 90% @ +45°C.

Physical features

- Dimensions: 92H x 448L x 395D mm
- Weight: 13 kg.

Power supply

- Input voltage: 115/220 Vac ± 15% 45-63 Hz, 21-60 Vdc
- Power: 60W max.

0101001001100111101010010011

Ancillary devices: FG101

FG101 is a mobile device used to store a maximum of 8 keys in compliance with the EUROCOM D/1 Crypto Supplement, or a maximum of 4 encrypted keys.

It is endowed with a battery that allows storage of the keys for up to one year.

 Line interface according to the EUROCOM D/1 Crypto Supplement Internal supply battery type: BA1372/U 6.75V-BA5372/U 6V.

Physical data

- Dimensions: 75 x 150 x 45 mm (H x L x D)
- · Weight: 0.6 kg.

TR101

TR101 is a portable punched tape reader used to transfer the keys on tape in compliance with the EUROCOM D/1 Crypto Supplement.

It is endowed with an internal battery that has a duration of one year.

- Line interface in compliance with the EUROCOM D/1 Crypto Supplement
- Internal supply battery type: BA1372/U 6.75V-BA5372/U 6V.

Physical data

- Dimensions: 60 x 150 x 45 mm (H x L x D)
- Weight: 0.7 kg.
