

Your Secrets are Safe with Tiger[®]

SECTRA

The more important the message, the greater the outside interest

In today's fast moving and everchanging world, secure communications are key to the accomplishment of a safer working environment. Yet the achievement of this security is significantly more complex and demanding than just ensuring that communications function. Vulnerability to interception of sensitive information by would-be intruders is a factor that must be taken into account. Effective voice encryption is a powerful tool in countering and repelling threats of this kind.

Sectra has evolved as a pioneer and driving force in the development of voice encryption technology, and Tiger is the culmination of these efforts. A unique personal encryptor for the exchange of sensitive information, this intelligent device excels in terms of security and flexibility enabling the user to encrypt telephone conversations via fixed and mobile telephony networks as well as via IP-networks and satellite systems. Wherever you are - your secrets are safe with Tiger.

Who needs strong voice encryption?

- Heads of state
- Ministers
- Officials
- Ambassadors
- Military personnel
- Security service

If you have the need to verbally convey highly sensitive information, the risk of its interception by others will always exist. As the leakage of sensitive information can have devastating consequences, a totally reliable voice encryptor is an indispensable tool.

Why Tiger?

- Secure phone conversations wherever you are
- Easy-to-use
- Certified by EU and NATO
- Tiger users in more than half of all EU member states

Tiger is ideally suited to function in today's mobile, intrusive, fast moving world. The common denominator for our Tiger users is that they have regulations for handling of security classified information and demands for approved security products. The beauty of Tiger lies in its unprecedented simplicity, mobility and flexibility that combines ease of operation with the highest level of security.

“Wherever you are – your secrets are safe with Tiger®.”

Communicate securely – wherever you are

Security can be compromised and infringed upon in everyday situations. Using Tiger is straightforward, meaning that it doesn't and shouldn't affect or compromise the way you work or live.

Secure calls and faxes are made with ease. Teleconferences are conducted without difficulty, file transfers performed, and classified computer networks remotely and readily accessed. All of this can be carried out in a totally secure environment with Tiger using both standard telephone lines and digital communication networks.

Mobility and flexibility at One

Tiger is also unique in that it not only enables secure operation from fixed locations such as the office or home, but also while on the move via digital networks such as GSM, ISDN, Internet Protocol (IP), and satellite communications – yet still maintaining the same high level of security.

Trusted since the 90's

Tiger has been in use with an satisfied international clientele since the nineties. Experience has taught us that user demands vary widely in terms of usage. For example, government ministers, ambassadors and military personnel operating in areas with

inadequate telecom infrastructure invariably have no other option than to communicate via satellite. With Tiger, telephone calls can be relayed and protected via the satellite system providing the best coverage – securely and safely.

Trustworthy and transparent

As part of our commitment to complete Life Cycle Management, Sectra provides in-house service, support and training facilities. The creation and development of strong, long-term relationships with our customers based on transparency and trust ensure you get the best out of your product and enable you to communicate securely – wherever you are.

Unique and double-approved

Our commitment to the utilization and incorporation of cutting-edge technology in our products guarantees the highest level of security for the encryption of phone calls. The latest generation of Tiger products, Tiger XS, qualifies as the only personal voice encryptor approved by the EU for the protection of both fixed and mobile phone calls up to and including the high security level SECRET UE. The credentials of this already unique encryptor are further endorsed by the fact that the Tiger XS is also certified by NATO for telecommunications at the security classification level NATO SECRET, thereby making life simpler and more secure for our European customers within NATO.

“Tiger XS is the only voice encryptor certified by both EU and NATO up to and including the high security level SECRET.”

An expanding circle of Tiger users

Characteristics such as flexibility and reliability render Tiger suitable for a wide range of secure communication application demands as reflected in an increasing number of customer groups.

The personal encryptor Tiger XS is widely used and popular among civil servants and government officials. Tiger XS is also increasingly favoured by discerning decision makers who need to protect their communications with strong security solutions. Tiger products are already in use in more than half of all EU member states.

An Encryptor you can trust

In addition to solutions for civilian security applications, we have been involved in the research and development of crypto products for defense requirements and the Tiger XS has evolved from previous NATO-approved Sectra products. European armed forces, battle groups and peace keeping operations can be found amongst our references. Tiger XS has also received NATO approval for the protection of fixed and mobile telecommunications.

“Tiger products are used in more than half of all EU member states.”

Tiger XS facts

Services	Encrypted phone calls, encrypted data transfers, encrypted fax, encrypted SMS and encrypted teleconferencing
Security level	Approved up to and including level SECRET. Certified by the EU [SECRET UE] and NATO [NATO SECRET].
Network connectivity	Standard telephone lines, digital networks (GSM, ISDN, IP) and satellite systems
Standby time	Active Bluetooth – 24 hours Power save mode – 150 hours
Talk time, Bluetooth	7 hours
Power supply	Integrated rechargeable (Li-Polymer)
Dimensions	118 x 68 x 22 mm
Weight	130 g
